

**EMERY WORLDWIDE
SORT HUB**

Dayton International Airport, OH

The existing heavy freight-sorting hub encompassed 500,000 sf originally. This first phase expansion created a facility that would increase the internal sort area by 200,000 sf with additional conveyor systems and incorporate a new structure to house truck docks, support offices, and food service areas in an additional 250,000 sf. Proposed in phases and according to an \$80 million master plan, this first phase cost \$40 million.

I worked as the Architectural Project Manager and primary design consultant for this project under another concern. The project was completed in 1999.

First Floor

Second Floor Offices - This addition is 900' in length.
