

Control Tower

Ramp

USPS EXPRESS MAIL HUB

Indianapolis International Airport, IN

The Eagle Network Hub is the central sorting facility for the United States Postal Express and Priority Mail services. The Building, Internal Conveyors, and Air/Land Side site work was awarded via a national competition and delivered as Design/Build Turn Key.

The project consists of 44 acres of airside apron and landside ramp flatwork. The building contains 365,000 sf of interior sorting space, truck dock, and offices. A unique feature is the immediate site ground control tower. A separate maintenance structure was built on the site, along with two ground equipment canopies.

The total project cost was \$62 million and was finished in 1992.. As a guaranteed contract, the delivery time for the project including design was 52 weeks. The D/B team accomplished this in 50 weeks. I worked as the Architectural Project Manager and designer for this project under another concern. This project won the 1992 Indianapolis AIA Honor Award.
